

Greetings from Advance Mold & Manufacturing, Inc. ,

We are sending you this newsletter to announce points of interest in our growth, achievements and activities. We've continued this communication as we strive to make your experience with us, one that benefits your teams and projects.

Advance Mold Increases Round and Ground Capabilities

Having the right equipment for the right job is common sense for anyone. With today's medical, life science and flip-top closure mold builds, Advance procured machinery to ensure they had repeatable precision in all components made in house.

Advance's CNC Hauser jig grinder and CNC Studer ID/OD grinder bring trusted names in the machine marketplace. Form grinding is done via a Wasino CNC grinder. Two shifts up to six days a week are staffed. With over thirty one machines in our grinding department, Advance's capabilities are well rounded in surface, ID/OD and form grinding.

Lathe work is done in our Sharp or Okuma Howa CNC lathe. The Okuma Howa CNC lathe features live tooling to take advantage of any manufacturing lead-time reduction possible.

Browse through our recently revised website site and see for yourself. Let us know if there is anything else you would like to see covered. Thank you so much for reading.

Sincerely,

Adam Cole
